Metadata

These reference tables contain statistics of the carbon dioxide emissions from the fuel and industries before the World War I. The emissions are broken down into different types of fuels, and then are broken down by region. The graph beside each table shows the total amount of emission in that year, and the absolute change over time. The x-axis is the absolute change while the y-axis is the total amount. Each circle represents a certain year.

It is obvious that Western Europe dominated the emissions throughout the 19th century, but that North America caught up in the 20th century. For both regions and different types of emissions, the economic downturn has a negative impact on the emissions.

Total CO₂ emissions from fossil fuel consumption and cement production, North America, 1790-1910, (billions of tonnes)

Source: Boden, T. A., Marland, G., and Andres, R. J.: Global, Regional, and National Fossil-Fuel CO₂ Emissions, Oak Ridge National Laboratory, U.S. Department of Energy, Oak Ridge, Tenn., U.S.A., doi 10.3334/CDIAC/00001_V2017, 2017; available at: http://cdiac.ess-dive.lbl.gov/trends/emis/overview_2014.html

Frequency: Decade before 1880, yearly after 1880, End of period

Observation date	Absolute change (billions of tonnes)	Emission (billions of tonnes)	Label
