Metadata

These reference tables contain statistics of the total population in China and several other South-east Asian countries. Here we also compare the UN projections made for these countries in 2017 and 2019. The graph besides each table shows the total population of that year, and the absolute change over time. The x-axis is the absolute change while the y-axis is the total population. Each circle represents a certain year.

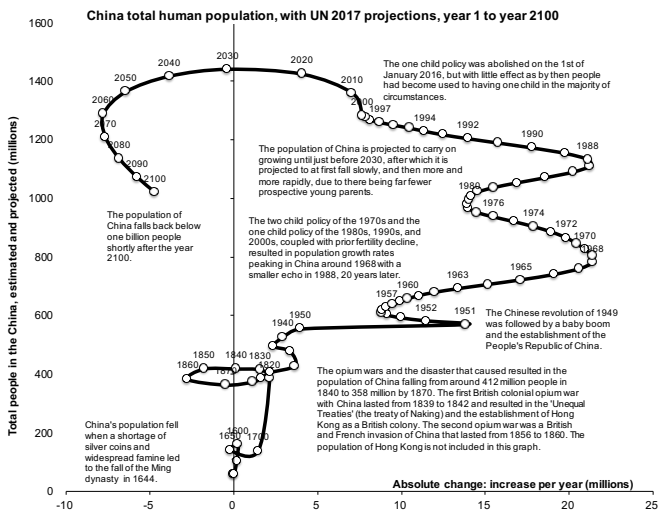

For the five countries analysed here, only the projections for Vietnam have been revised downward, and those for the other four have been revised upward. Many South-east Asian countries are now expected to see greater population growth than was expected by the UN in 2017.
