## Metadata

---

These reference tables contain statistics of the total population in Africa (as a whole and of some African countries). Here we also compare the projections made for these countries in 2017 and 2019. The graph besides each table shows the total population of that year, and the absolute change over time. The x-axis is the absolute change while the y-axis is the total population. Each circle represents a certain year.

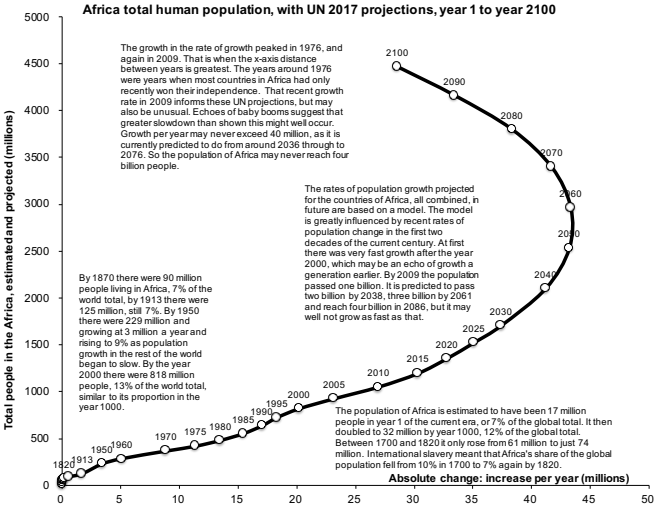

Although the 2019 UN report made a downward revision for the future population in Africa, some countries within the continent are now projected to have more people in the future than was projected in 2017 (like Ethiopia and Egypt)

---

**Total human population, with projections from 2017 UN report, Africa, 1-2100, (million people)**
