Metadata

These reference tables contain statistics of the total population in the India sub-continent and the three countries in that continent. Here we also compare the projections made for these countries in 2017 and 2019. The graph besides each table shows the total population of that year, and the absolute change over time. The x-axis is the absolute change while the y-axis is the total population. Each circle represents a certain year.

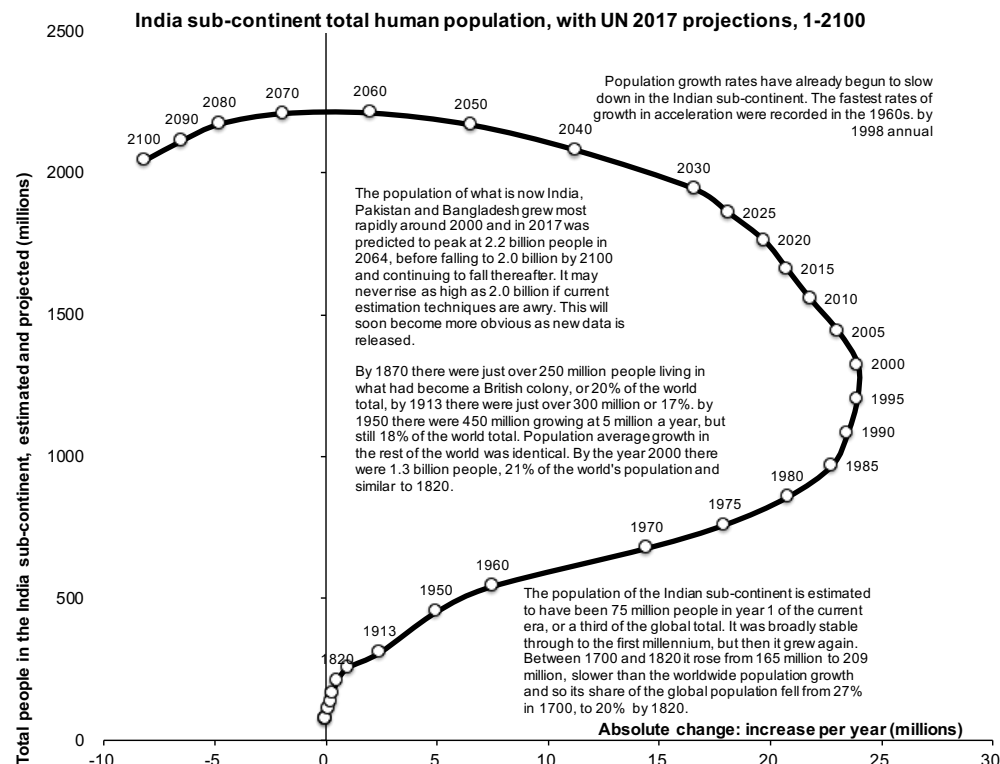

A huge downward revision has been made in the 2019 UN report for both India and Bangladesh.
