# Metadata

These reference tables contain statistics of the total population in the remainder of the Eurasia, which includes the whole Europe and Asia excluding China, Japan, the Indian subcontinent and the British Isles. Several countries within this large region are also presented here. We also compare the projections made for these countries in 2017 and 2019. The graph besides each table shows the total population of that year, and the absolute change over time. The x-axis is the absolute change while the y-axis is the total population. Each circle represents a certain year.

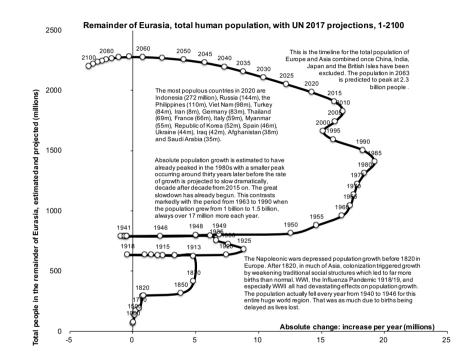

Although for the whole region, the projected population has been revised downward, for the four countries here their projections have been revised upward.
