Metadata

These reference tables contain statistics of the total population in the overall oceania and several countries in it. We also compare the projections made for these countries in 2017 and 2019. The graph besides each table shows the total population of that year, and the absolute change over time. The x-axis is the absolute change while the y-axis is the total population. Each circle represents a certain year.

The whole region, as well as the four countries presented here, is projected to have a slightly larger population in 2100 than it was projected to have before in the UN report.
