Metadata

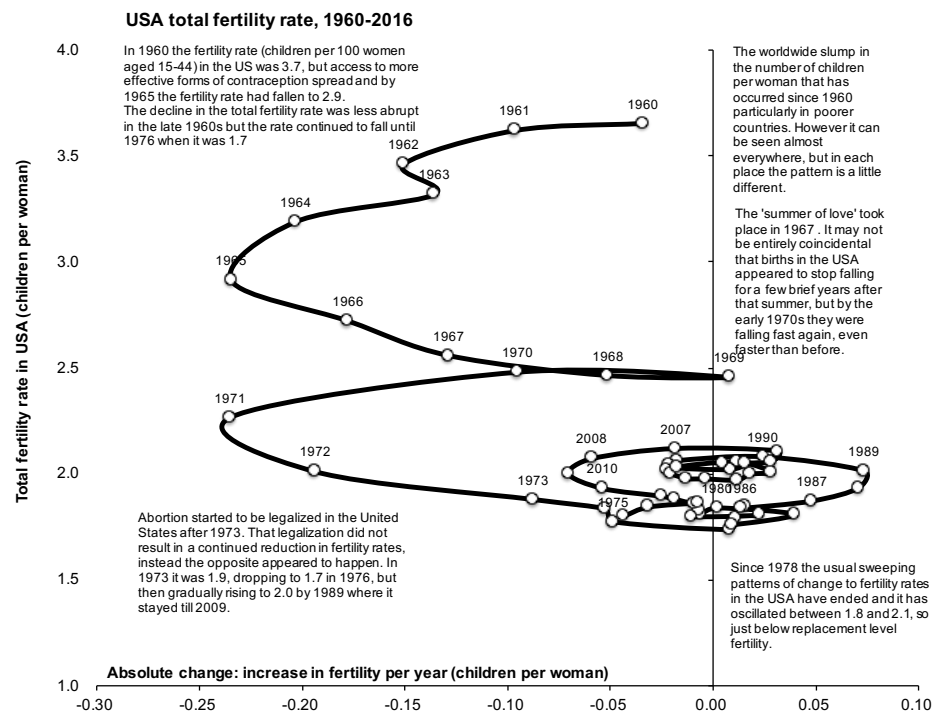

These reference tables contain statistics of the fertility rate in several countries in North America since 1960. It also compares the data from the World Bank and the United Nations World Population Prospects reports of 2017, and 2019. The fertility rate is the average number of children women have had or are likely to have in their lifetime. The graph besides each table shows the fertility rate of that year, and the absolute change over time. The x-axis is the absolute change while the y-axis is the total fertility rate. Each circle represents a certain year.

The fertility rate has declined in all four countries here. It declined most dramatically in the 1960s for US and Canada and in the 1970s for Mexico and Cuba. The scale of change is very much smaller for the past two decades than before for all four countries.
