These reference tables correspond to those in Figure 34, but have zoomed in on more recent period. In doing so, you can find the changes in the recent two or three decades much clearer. The graph besides each table shows the fertility rate of that year, and the absolute change over time. The x-axis is the absolute change while the y-axis is the total fertility rate. Each circle represents a certain year.

For all countries, the fertility rate in the most recent years has either accelerated declining or slowed down the growth.
