## Metadata

---

These reference tables contain statistics of the fertility rate in China and several countries in South East Asia since 1960. It also compares the data from the World Bank and the United Nations World Population Prospects reports of 2017, and 2019. The fertility rate is the average number of children women have had or are likely to have in their lifetime. The graph besides each table shows the fertility rate of that year, and the absolute change over time. The x-axis is the absolute change while the y-axis is the total fertility rate. Each circle represents a certain year.

The fertility rate has declined in all five countries here.
