These reference tables correspond to those in Figure36, but have zoomed in on more recent period. In doing so, you can find the changes in the current century much clearer. The graph besides each table shows the fertility rate of that year, and the absolute change over time. The x-axis is the absolute change while the y-axis is the total fertility rate. Each circle represents a certain year.

#### Total fertility rate, China, 1999-2016, (children per woman)
