Metadata

These reference tables contain statistics of the GDP per capita in several countries in North America. The historical data have been adjusted to avoid significant gap when joining with the UN or Federal data. The way in which they are adjusted is the same way when we adjusted the population data previously. The graph besides each table shows the GDP per capita of that year, and the absolute change over time. The x-axis is the absolute change while the y-axis is the GDP per capita. Each circle represents a certain year.
