These reference tables contain statistics of voting results in several presidential elections in several states in the USA. Here we compare the proportion in that state voting Democratic Party to that of national average. The graph besides each table shows the advantage of Democratic Party in that year in that state, and the absolute change over time. The x-axis is the absolute change while the y-axis is the advantage measured by percentage points. Each circle represents a certain election.

The more advanced the state, the more likely it shows an advantage in voting Democratic Party in the most recent elections

Presidential elections, New York, Democratic advantages, 1932-2016 (% point)
