## Metadata

These reference tables contain statistics of different consumer loans for different countries (depending on the availability of data). The first two tables are for US, which report the car loan and credit card debt respectively. For UK, Japan a China, card loans are reported. But for Germany, the household loans (which include mortgage, consumer and enterpreneurial loans) are generally reported with their divisions being reported only after the year 2005. Hence for Germany, we give the table for overall household loans from 1991 onwards and its long-term and short-term loans. The consumer loans for Germany are graphed for 2005 onwards. The graph beside each table shows the total amount of debt, and the absolute change over time. The x-axis is the absolute change while the $y$ axis is the total amount (or number). Each circle represents a certain year.
